September 2010: Version **2.0 Webris** released !

WISroGIS 2.0 Webris - component & plugin for **visual maps** and **layers** management under Joomla CMS.

WISroGIS offer support for most commercial mapping sources, as **Google Maps**, **Yahoo Maps**, **Bing**, **Virtual Earth**), **OpenStreetMap** and many more.

Besides the above maps use, the user may access map data sources through the standard geospatial web services, such as **WMS**.

The maps may be used – as stand alone content or embeded into Joomla articles – to present various locations or overlay **any type of geospatial information** – places of interest, business locations etc.

The new Joomla **WISroGIS component** brings **enhanced GIS map publishing** under Joomla:

- visual maps configuration and layers addition

- including **maps & layers samples**: all Google Maps, Yahoo Maps, Bing (Virtual Earth) and OpenStreetLayers

- over **75 predefined styles** (image-marker)

- visual **layers management**:
 - Google Maps,
 - Yahoo Maps
 - Bing/Virtual Earth
 - OpenStreetMaps
 - KML layers - local and remote files
 - GPX (navigation tracks) layers
 - Custom coded layer - WMS, WFS etc

- **placemarks** (locations markers) visual management - geo-location from **direct input, geocoded address** from Google Maps or by **direct click** on map

- placemarks **categories management**

- **styles management** - define your own image-markers and assign them to the categories or placemarks
