

Mapping GPX navigation data

Written by Administrator

Thursday, 21 October 2010 11:01 - Last Updated Tuesday, 30 November 2010 15:08

This article samples a Europe map with multiple base layers (Google, Bing, OpenStreetMap, Yahoo); on top of base layers 3 **sample GPX files** overlay are shown:

Zoom into each country to view the **sample navigation tracks**:

- **Czech Republic** (yellow solid line, 8 pixels width, 70% opacity)
- **Austria** (orange dash-dot line, 2 pixels width)
- **Netherlands** (car icon, red line, 90% opacity).

{WISroGIS map_id='15' ~}

Note: The first two GPX tracks contain only geographical information, no additional details. The Netherlands GPX file displays both tracks and waypoints with route details (click on each track element to see **additional information**).
